Swanked: Organisation overview

Brand Identity:

Founded in 2013 by Lindelani Nedoboni, Swanked is a South African streetwear and sneaker marketplace. What was a passion project has since become a popular curated marketplace for sneaker enthusiasts and street culture.

Mission and vision statement:

Swanked aims to provide a meticulously curated inventory of authentic streetwear whilst staying at the forefront of South African street culture and trends.

Target audience:

The main audience comprises Gen Z, Millennials, sneaker collectors, and urban fashion enthusiasts.

Website goals and Objectives:

- **Dynamic UI Adaptability:** includes a colour theme toggle for user customization
- **Gamified Engagement:** creates an immediate feedback loop that keeps users engaged
- **Performance Impact:** Increases dwell time and sales conversion rates.

Current website analysis:

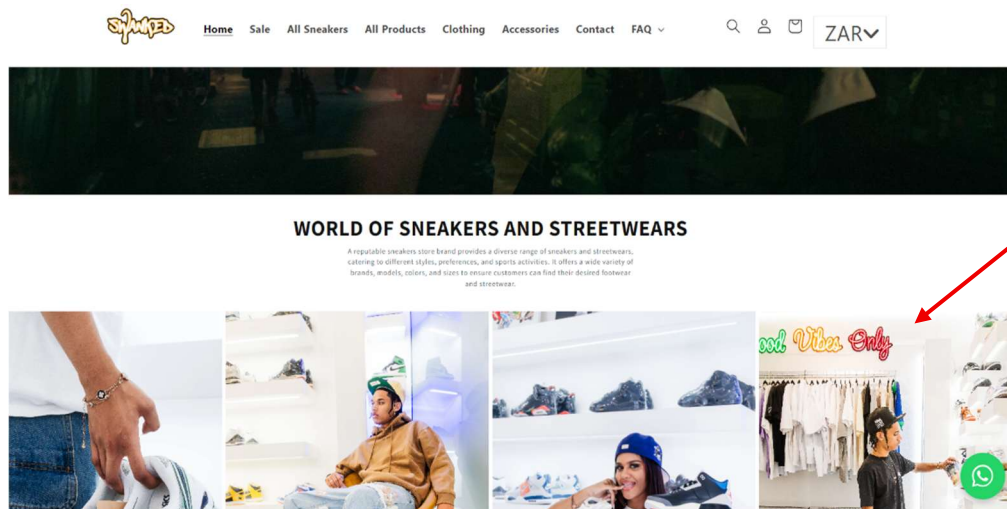

Figure 1: original website home page

A big strength with the home page of the original website is that it includes authentic images of the actual store and these images carry the essence of street and urban culture well.

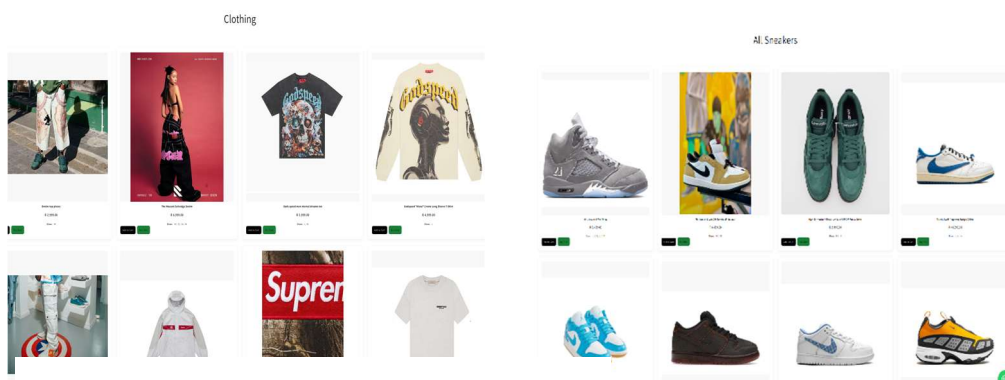

Figure 2: original product page

The website's main weakness is its sterile presentation, which does not align with the street culture vibe.

- The current website faces inconsistent branding, a lack of colour, and an unintuitive navigation structure. Additionally, high-resolution images lead to longer loading times, negatively affecting the performance rates of the website.

Proposed website features and functionality:

Proposed Features:

- The redesign features a tailored Dynamic UI Adaptability system that transforms the website from a fixed layout to an engaging, user-focused experience.

Key Functionalities:

- Key features of the website include a Dynamic UI Adaptivity Toggle for colour palette changes, responsive navigation for cross-device accessibility, a grid-based product gallery for effective visuals, and a seamless checkout flow designed to simplify and enhance the purchasing process.

Design and user experience:

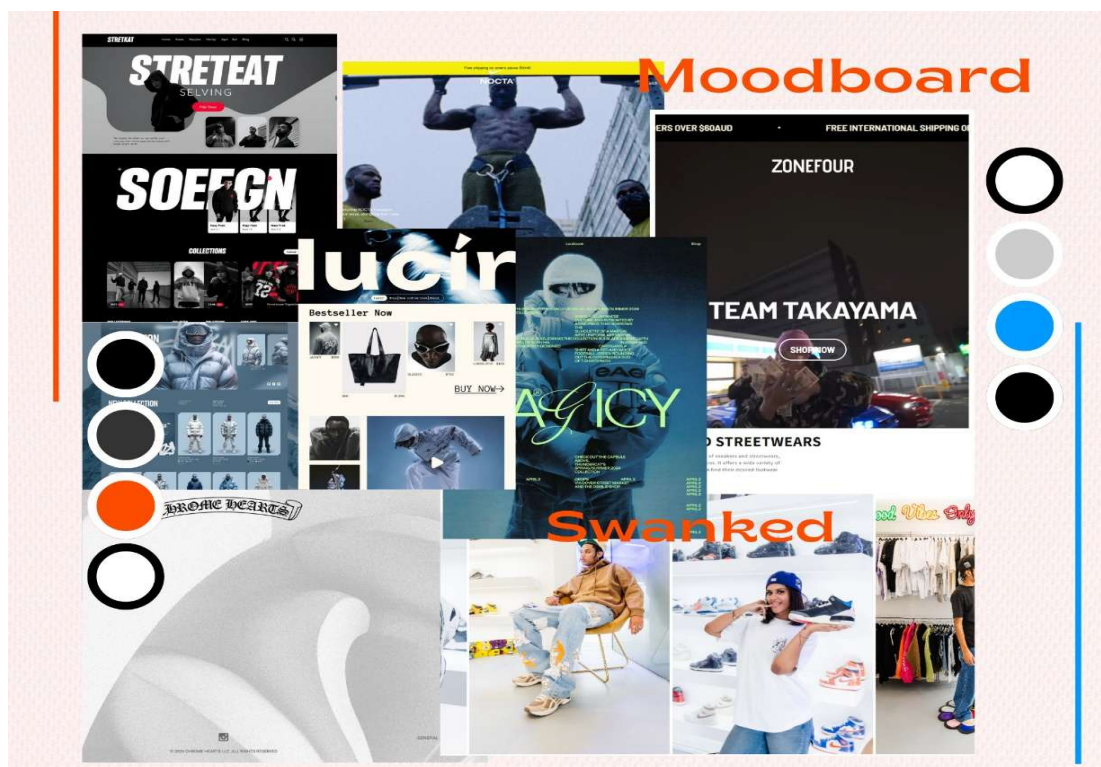

Figure 3: mood board for swanked website (Author's own, 2026)

Colour Palette:

	Default theme (Street culture)	Alternate theme (high visual)
Background	#000000 (Onyx Black)	#FFFFFF (Pure White)
Foreground/Text	#FFFFFF (Pure White)	#000000 (Onyx Black)
Accent	#FF4500 (Safety Orange)	#2D5BFF (Electric Blue)

Typography:

Headings: Custom graffiti font, to convey the bold, vibrant aesthetic of the website.

Body: Inter or Roboto, to ensure legibility across all screen sizes.

Layout strategy:

- The website will implement a grid-based layout to manage product images, maintaining user focus on the visuals. Adopting a "mobile-first" approach, the design will stack vertically on smaller screens and shift to a grid format on larger screens, ensuring a consistent user experience across all devices.

Low-fidelity wireframe:

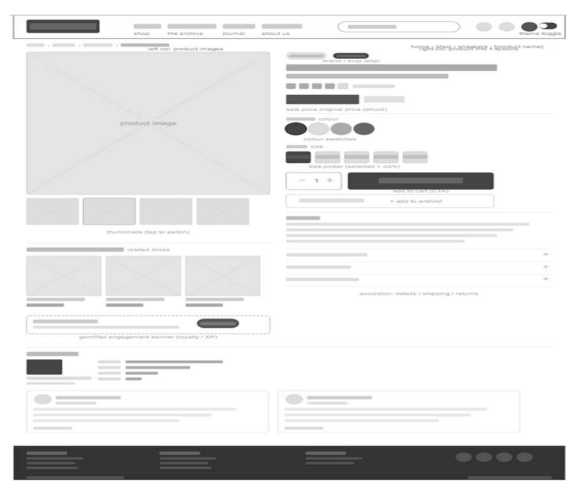

Figure 4: Lo-fi Wireframe of the website

Technical Requirements:

Hosting and Domain requirements:

- Swanked.co.za will utilize managed shared cloud hosting, outsourcing infrastructure for server maintenance, security patching, and scaling. It employs SSL/TLS certificates to encrypt sensitive data during transfers, ensuring the protection of payment details and login credentials. The website guarantees a 99.9% uptime SLA, ensuring constant accessibility, which is essential for product launches and sales.

Programming languages and Frameworks:

Layer	Technology
Structure	HTML
Styling	CSS
Interactivity	JavaScript
Animation	CSS

Timeline and Milestones:

Phase	Focus area
Part 1: 20 th April	Research, sitemap, and wireframe
Part 2: 29 th May	Finalize code and project files

Budget:

- Development: R8000 to R12000,
hosting: R200 to R400 monthly.
Maintenance: R300 to R500 per month
Total budget estimate: R8500 to R12900.
